IN THE CLAIMS:

Please amend claims 1-9. Please cancel claims 11-20 without prejudice or disclaimer. Please note that all claims currently pending and under consideration in the above-referenced application are shown below. Please enter these claims as amended. This listing of claims will replace all prior versions and listings of claims in the application.

Listing of Claims:

- 1. (Currently amended) A print medium comprising an ink-receiving layer and a coated paperbase, the ink-receiving layer emprising consisting of at least one hydrophilic polymer, at least one cross-linking agent, at least one mordant, inorganic particles, e-at least one nonionic siloxane copolymer-surfactant surfactant, and at least one nonsiloxane surfactant, wherein the at least one hydrophilic polymer is selected from the group consisting of polyvinyl alcohol, a copolymer of polyvinylalcohol with polyethyleneoxide, a copolymer of polyvinylalcohol with polyacrylic or maleic acid, acetoacetylated polyvinylalcohol, polyethylene oxide, hydroxyethyl cellulose, hydroxypropylmethyl cellulose, poly(N-ethyl-2-oxazoline), casein, starch, agar, carrageenan, cellulose, carboxymethyl cellulose, dextran, pullulan, gelatin, derivatives thereof, and mixtures thereof.
- 2. (Currently amended) The print medium of claim 1, wherein the <u>at least one</u> nonionic siloxane copolymer surfactant comprises the following structure:

$$A \xrightarrow{CH_3} O \xrightarrow{X} X \xrightarrow{CH_3} O \xrightarrow{X} A$$

wherein A is $-CH_3$ or B, and B is a C_1 to C_{10} straight chain or branched primary or secondary hydroxy terminated alkylene group, and x and y are such as to provide a molecular weight greater than about 1000.

3. (Currently amended) The print medium of claim 1, wherein the <u>at least one</u> nonionic siloxane copolymer surfactant comprises the following structure:

$$\begin{array}{c|c} & & & & \\ & &$$

wherein m, n, x, and y are such as to provide a molecular weight greater than about 1000, wherein Z is H, $-CH_3$, or a C_1 to C_{10} straight chain or branched primary or secondary hydroxy terminated alkylene group, and wherein the structure contains at least one polyethyleneoxide group.

- 4. (Currently amended) The print medium of claim 1, wherein the surface tension of the <u>at least one</u> nonionic siloxane copolymer surfactant is from about 20 dyne/cm to about 35 dyne/cm.
- 5. (Currently amended) The print medium of claim 1, wherein the hydrophilic/hydrophobic balance value (HLB) of the <u>at least one</u> nonionic siloxane copolymer surfactant is from about 10 to about 30.

- 6. (Currently amended) The print medium of claim 1, wherein the weight percent (wt %) of the at least one nonionic siloxane copolymer surfactant is present at from about 0.05wt %-0.05 weight percent of a total weight of the ink-receiving layer to about 2 wt % 2 weight percent of the total weight of the ink-receiving layer.
- 7. (Currently amended) The print medium of claim 1, wherein the <u>at least one</u> nonionic siloxane copolymer surfactant has a molecular weight of greater than about 1000.
- 8. (Currently amended) The print medium of claim 1, wherein the ink-receiving layer-further at least one nonsiloxane surfactant comprises a nonionic or anionic nonsiloxane surfactant, wherein the nonionic or anionic nonsiloxane surfactant is present in a concentration that is less than the concentration of the at least one nonionic siloxane copolymer surfactant present in the ink-receiving layer.
- 9. (Currently amended) The print medium of claim 1, wherein the <u>at least one</u> nonionic siloxane copolymer surfactant comprises at least one polysiloxane-polyethylene oxide compound or at least one polysiloxane-polyethylene oxide-polypropylene oxide compound.
- 10. (Original) The print medium of claim 1, wherein the coated paperbase comprises a coated paper, a cast-coated paper, or a commercial offset paper.

Claims 11-20 (Canceled)
